

Module 6

Introduction

Fire Emergencies : It is very easy to become disoriented and lose consciousness in smoke. When something burns, it releases transparent gases. These gases are lighter than air, so they move very rapidly throughout a building. They are also toxic, so they can kill quickly. Fires are fast and deadly. When you are in a fire situation, you won't have time to think about how to handle it. This is why you must study your site's fire safety and emergency procedure plans before a fire happens. Know the plan and your role in it very well.
