

Module 6

Weapons Emergencies! What is a weapon?

A weapon can be defined as a tool that can hurt or defend you or someone else. Some examples of weapons that security guards could encounter include guns, knives, pens, pencils, nail files, razors, broken glass, hammers, chains, bats, steel pipes and so on.

In a weapon emergency safety is paramount. This means everyone's safety is the most important, including you as the Security Professional, the client and others under your protection such as the general public and even the agitated or hostile subject under these circumstances.
